## 1. INTRODUCTION

### 1.1 PURPOSE

This document presents the Cosmic Origins Spectrograph (COS) Device Control Electronics (DCE) Flight Software (FSW) certification procedure. The purpose of this procedure is to verify that the FSW satisfies Software Requirements according to the method specified in the DCE FSW Test Plan (STP).

### 1.2 SCOPE

This test procedure comprises the steps necessary to verify that the FSW satisfies Software Requirements Document (SRD) paragraph 5.1.1.5 — Code in PROM: Verify proper CRC value is reported for the PROM code image.

### 1.3 LIMITATIONS AND CONSTRAINTS

This test cannot be run in parallel with any other commanding activity directed at the DCE FSW (such as, for example, the periodic transmission of NOOP commands). Test hardware shall be visually inspected, and its configuration noted, prior to conducting this test.

### 1.4 PROCEDURE OVERVIEW

The procedure requires the `hks` tools running on the Sun SparcStation Electronic Ground Support Equipment (EGSE) whose network IP address is one of

**shorty.ssl.berkeley.edu**  
**taiyo.ssl.berkeley.edu**  
**ginger.ssl.berkeley.edu.**

Test time shall be scheduled in advance. The Test Conductor must be logged into the Unix system as user `eagcos`, and be commanding from the appropriate directory. This directory contains both the test script file and the shell script file; these two files control test execution. The test is conducted by invoking the shell script. This shell script in turn invokes the Perl 5 program `UniScript.pl`, which resides in its own distinct directory. The test procedure steps have been pre-recorded in the test script file, and are executed interpretively by the `UniScript` program. The shell script and test script are attached to this document as appendices. As `UniScript` executes the test script it sends results to the operator console and to two report files, which are also placed in the current directory. After completion of the test script, the Test Conductor can certify successful test

execution by examining the contents of the report files and determining that required outputs are present in them. Printed copies of the report files are attached to the manually completed checklist (Paragraph 4 below) as documentation of the test.

### 1.5 THEORY OF TEST

Since UniScript automatically re-computes the CRCs of its buffers whenever they are modified in any way, it is necessary only to download the PROM area to a UniScript buffer, then compare the buffer's CRC with the CRC for the PROM code computed by the DCE FSW Boot State code.

### 1.6 TEST SCRIPT IMPLEMENTATION

The script forces Boot State by emitting a POR packet (0x80000000), then instructs FSW to (continuously) compute the CRC of the 6K (6144 = 0x1800) byte ROM area by means of the LFDRC 0,6144,1 command.

The "download" capability of the FSW has two important restrictions: it is limited to blocks of at most 1K (1024) bytes; and it can transfer data only from the External RAM of the 8051. Therefore the script downloads the ROM area in six separate single-page operations (a "page" = 1K bytes). Each of the six pages (at offsets 0, 1K, 2K, etc.) of ROM is moved to the "scratch area" (see 1.6.1 below), then downloaded to Buffer 2 at the appropriate page offset. After the sixth such download, Buffer 2 contains the complete ROM image. The HK data are interrogated to ensure that Buffer 2 has the right length (6144) and that its CRC matches the HK item LFMCR, which reports the CRC value requested by the LFDRC command issued previously.

#### 1.6.1 Test Script Arguments

The script is parameterized as shown in the following Table:

**Table 1-1: Parameters/Arguments for stp5\_1\_1\_1d.tst**

Parameter	Meaning	Correct Argument for Version 1.13
#0	Absolute hex storage address of intermediate "scratch" buffer for ROM data	C000

These parameters must be encoded into the shell script u (see Appendix A).

**2. SPECIAL INSTRUCTIONS**

**2.1 QUALITY ASSURANCE**

QA support is required to verify the configuration and setup environment as well as monitoring test steps and verifying results.

**2.2 SAFETY**

**2.2.1 Personal Safety**

To ensure the safety of the test personnel during test execution the guidelines contained in Paragraph 3.4, Reference [1] will be adhered to.

**2.2.2 Test Article and Equipment Safety**

- If access within one (1) meter of COS bench electronics is necessary, wrist straps attached to technical ground shall be used by all personnel involved in handling of any COS test article. Overcurrent and overvoltage shall be set to remove power if nominal limits are exceeded.
- Emergency Power Shutdown — If, during the COS DCE FSW test, power is ON and a severe test equipment failure results in the power system exceeding specified limits, the Test Conductor shall direct or perform shutdown of power.

**2.3 CONTAMINATION**

All flight hardware shall be handled with clean latex gloves; it shall be covered with clean ESD material and/or stored in a clean flow-bench.

**3. SUPPORT REQUIREMENTS**

**3.1 PERSONNEL**

Execution of the COS DCE FSW certification procedure requires the following personnel (to be completed at the Test Readiness Review (TRR)):

Test Director: \_\_\_\_\_  
Test Conductor: \_\_\_\_\_  
Test Technician: \_\_\_\_\_

QA: \_\_\_\_\_

3.2 TOOLS, EQUIPMENT, AND MATERIALS

The following is a list of tools, equipment, or materials required in this test. Record manufacturer and model, metrology, or property numbers of equipment used, where appropriate. Record calibration due dates where appropriate.
