1. INTRODUCTION

1.1 PURPOSE

This document presents the Cosmic Origins Spectrograph (COS) Device Control Electronics (DCE) Flight Software (FSW) certification procedure. The purpose of this procedure is to verify that the FSW satisfies Software Requirements according to the method specified in the DCE FSW Test Plan (STP).

1.2 SCOPE

This test procedure comprises the steps necessary to verify that the FSW satisfies Software Requirements Document (SRD) paragraph 5.5.1.2 — Capability to Upload Data.

1.3 LIMITATIONS AND CONSTRAINTS

This test cannot be run in parallel with any other commanding activity directed at the DCE FSW (such as, for example, the periodic transmission of NOOP commands). Test hardware shall be visually inspected, and its configuration noted, prior to conducting this test.

1.4 PROCEDURE OVERVIEW

The procedure requires the hks tools running on the Sun SparcStation Electronic Ground Support Equipment (EGSE) whose network IP address is one of:

- shorty.ssl.berkeley.edu
- taiyo.ssl.berkeley.edu
- ginger.ssl.berkeley.edu

Test time shall be scheduled in advance. The Test Conductor must be logged into the Unix system as user eagcos, and be commanding from the appropriate directory. This directory contains both the test script file and the shell script file; these two files control test execution. The test is conducted by invoking the shell script. This shell script in turn invokes the Perl 5 program UniScript.pl, which resides in its own distinct directory. The test procedure steps have been pre-recorded in the test script file, and are executed interpretively by the UniScript program. The shell script and test script are attached to this document as appendices. As UniScript executes the test script it sends results to the operator console and to two report files, which are also placed in the current directory. After completion of the test script, the Test Conductor can certify successful test
execution by examining the contents of the report files and determining that required outputs are present in them. Printed copies of the report files are attached to the manually completed checklist (Paragraph 4 below) as documentation of the test.

1.5 THEORY OF TEST

The test verifies that a block of memory can be uplinked to the DCE by using $\text{LFDUPLOD}$ to transfer a block from the EGSE to the DCE, then using $\text{LFDDNLOD}$ to return it to the EGSE, then comparing the transmitted with the received block.

1.6 TEST SCRIPT IMPLEMENTATION

1.6.1 Test Script Arguments

The script is parameterized as shown in the following Table:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Meaning</th>
<th>Correct Argument for Version 1.13</th>
</tr>
</thead>
<tbody>
<tr>
<td>#0</td>
<td>Absolute hex storage address of 8051 “scratch” area</td>
<td>C000</td>
</tr>
</tbody>
</table>

These parameters must be encoded into the shell script $u$ (see Appendix A).

1.6.2 Test Script Coding

The script uses standard $u\text{niScript}$ commands and directives.

2. SPECIAL INSTRUCTIONS

2.1 QUALITY ASSURANCE

QA support is required to verify the configuration and setup environment as well as monitoring test steps and verifying results.

2.2 SAFETY

2.2.1 Personal Safety

To ensure the safety of the test personnel during test execution the guidelines contained in Paragraph 3.4 Reference [1] will be adhered to.
2.2.2 Test Article and Equipment Safety

- If access within one (1) meter of COS bench electronics is necessary, wrist straps attached to technical ground shall be used by all personnel involved in handling of any COS test article. Overcurrent and overvoltage shall be set to remove power if nominal limits are exceeded.
- Emergency Power Shutdown — If, during the COS DCE FSW test, power is ON and a severe test equipment failure results in the power system exceeding specified limits, the Test Conductor shall direct or perform shutdown of power.

2.3 CONTAMINATION

All flight hardware shall be handled with clean latex gloves; it shall be covered with clean ESD material and/or stored in a clean flow-bench.

3. SUPPORT REQUIREMENTS

3.1 PERSONNEL

Execution of the COS DCE FSW certification procedure requires the following personnel (to be completed at the Test Readiness Review (TRR):

- Test Director: ________________________________
- Test Conductor: ______________________________
- Test Technician: ______________________________
- QA: _______________________________________

3.2 TOOLS, EQUIPMENT, AND MATERIALS

The following is a list of tools, equipment, or materials required in this test. Record manufacturer and model, metrology, or property numbers of equipment used, where appropriate. Record calibration due dates where appropriate.

- Boot Mode ROM: schematic 27C256

  Engineering Ground Support Equipment (see paragraph 1.4). Indicate specific configuration:
3.3 DATA/SOFTWARE

The following files must be present:

<table>
<thead>
<tr>
<th>Table 3-1: Required Program and Data Files</th>
</tr>
</thead>
<tbody>
<tr>
<td>EGSE (shorty) Directory</td>
</tr>
<tr>
<td>----------------------------</td>
</tr>
<tr>
<td>\disks\galex\users\galex\tes\uniscript\</td>
</tr>
<tr>
<td>\disks\galex\users\galex\tes\uniscript\stp5_5_1_2\</td>
</tr>
<tr>
<td>Ditto</td>
</tr>
</tbody>
</table>

In addition, the \hks tools must be active. Directions for activating \hks are given in UCB-COS-DOC-1118 (Paragraph 3.4 Reference [4]).

3.4 REQUIRED DOCUMENTATION

<table>
<thead>
<tr>
<th>Reference</th>
<th>Document Number</th>
<th>Title</th>
</tr>

</tr>
</tbody>
</table>

4. PROCEDURE/TASK STEPS

4.1 PRE-OPERATION ACTIVITIES

4.1.1 Make Sure that \hks Tools Are Active

Follow the procedure given in Paragraph 3.4 Reference [4].

4.1.2 Make Sure that the Proper ROM Is Installed
Visually verify that the ROM under test is installed: if EEPROM, in U18: if PROM, in U2 and U7.

4.1.3 Log In to the EGSE

<table>
<thead>
<tr>

4.3 POST-OPERATION ACTIVITIES

4.3.1 Copy Reports to PC Files and Print Them

Using an FTP client, copy the u, stp5_5_1_2.tst, stp5_5_1_2_rp1, and stp5_5_1_2_rp2 files to appropriate PC files. Include these files as Appendices A, B, C, and D with this completed form.

4.3.2 Complete The Test Procedure Form

Ensure that all blank fields in this report are completed correctly and submit the completed report to QA.
