1. INTRODUCTION

1.1 PURPOSE

This document presents the Cosmic Origins Spectrograph (COS) Device Control Electronics (DCE) Flight Software (FSW) certification procedure. The purpose of this procedure is to verify that the FSW satisfies Software Requirements according to the method specified in the DCE FSW Test Plan (STP).

1.2 SCOPE

This test procedure comprises the steps necessary to verify that the FSW satisfies Software Requirements Document (SRD) paragraph 5.5.2.2 — Download Data Timing.

1.3 LIMITATIONS AND CONSTRAINTS

This test cannot be run in parallel with any other commanding activity directed at the DCE FSW (such as, for example, the periodic transmission of NOOP commands). Test hardware shall be visually inspected, and its configuration noted, prior to conducting this test.

1.4 PROCEDURE OVERVIEW

The procedure requires the **hks** tools running on the Sun SparcStation Electronic Ground Support Equipment (EGSE) whose network IP address is one of

shorty.ssl.berkeley.edu
taiyo.ssl.berkeley.edu
ginger.ssl.berkeley.edu.

Test time shall be scheduled in advance. The Test Conductor must be logged into the Unix system as user **eagcos**, and be commanding from the appropriate directory. This directory contains both the test script file and the shell script file; these two files control test execution. The test is conducted by invoking the shell script. This shell script in turn invokes the Perl 5 program **UniScript.pl**, which resides in its own distinct directory. The test procedure steps have been pre-recorded in the test script file, and are executed interpretively by the **UniScript** program. The shell script and test script are attached to this document as appendices. As **UniScript** executes the test script it sends results to the operator console and to two report files, which are also placed in the current directory. After completion of the test script, the Test Conductor can certify successful test execution by examining the contents of the report files and determining that required

outputs are present in them. Printed copies of the report files are attached to the manually completed checklist (Paragraph 4 below) as documentation of the test.

1.5 THEORY OF TEST

For the sake of control, the script generates an array (Buffer 1) of 1024 pseudo-random eight-bit values, then uploads these to a “scratch” buffer at location 0xC000 of DCE external storage. This scratch buffer is then downloaded to **UniScript** Buffer 2, and the two buffers are compared to ensure the integrity of the uploaded data. The script establishes the zero-point of a time-line, then proceeds to download the scratch buffer ten times, checking the elapsed time after each download to ensure that it is less than or equal to one second. Since the Unix environment in which **UniScript** executes does not provide time-related library functions with granularity less than one second, the script derives its timing information from the time values provided by the FSW itself — namely by the combination of the HK datum **LFCTIME** and the internal variable **mTICKS** accessed by means of a memory monitor (see Table 1-1, paragraph 1.6.3).

1.6 TEST SCRIPT IMPLEMENTATION

1.6.1 Test Script Arguments

The script is parameterized as shown in the following Table:

Table 1-1: Parameters/Arguments for stp5_5_2_2.tst

Parameter	Meaning	Correct Argument for Version 1.13
#0	Absolute hex storage address of “scratch” buffer for special 8051 code	C000
#1	Absolute hex storage address of mTICKS FSW variable	2460

These parameters must be encoded into the shell script **u** (see Appendix A).

1.6.2 Test Script Coding

The script uses standard **UniScript** commands and directives.

1.6.3 Explanation of the CHECK Directive

For the purposes of this section, the term “system time” is defined to mean the sum of the HK variable **LFCTIME** and 1/50th of the value of the FSW variable **mTICKS** (at 0x2460 in the Patchable Constants). The latter variable counts 20-ms “ticks” since the last

incrementation of **LFCTIME**, but is not automatically made available in the HK data. The script acquires its value by setting memory monitor 7 to 0x2460, then using the (8-bit) value **LFDMONS[7]** in the HK data. The script also uses two Perl scalar variables, **\$xt** and **\$yt**,¹ representing, respectively, system time computed from the previous HK packet, and system time computed from the current packet. **\$xt** is initialized by means of a **CHECK** directive that always succeeds, namely

```
CHECK 1,((($xt=$LFCTIME+$LFDMONS[7]/50.0)==$xt)
```

Verifying the requirement that each HK pack arrive no later than .9 seconds after the preceding one (assuming commanding at .9-second intervals) is equivalent to executing the following simple segment of Perl code after reception of each HK packet:

```
$yt = $LFCTIME+$LFDMONS[7]/50.0; # seconds + (fiftieths of a second)/50
if ($yt <= $xt + .9)    # should not be later than previous system time + .9sec
    {$xt = $yt}          # if OK, update $xt to current system time
else
    {$xt = 0}            # if not, set $xt=0; CHECK will discover this
if ($xt == 0)
    {terminate the script}
```

It is possible, owing to the special characteristics of the Perl assignment (=) and conditional-value (?:) operators, to compress this segment into a single Perl expression, and hence to incorporate it into a single UniScript **CHECK** directive. This is done as follows. The Perl expression

$$($yt=$LFCTIME+$LFDMONS[7]/50.0) \leq $xt+.9$$

compares the current system time with that of the previous HK packet; but it also has the “side-effect” of assigning the current system time to **\$yt** (as a floating-point number). Furthermore, the value of the expression is either **true** or **false**, and so may be used as the 1st operand of a Perl “conditional operator” ?:². Hence the expression

$$((($yt=$LFCTIME+$LFDMONS[7]/50.0) \leq $xt+.9) ? $yt : 0$$

¹ These variables are “automatically re-vivified” (see Perl documentation) for this script by virtue of their occurrence in the Perl-expression argument of a UniScript **CHECK** directive; they are not “standard” Perl variables like **\$B1**, **\$CRC1**, etc.

² **x1** ? **x2** : **x3** takes the value **x2** if **x1** is true, otherwise the value **x3**.

evaluates to $\$yt$ (if $\$yt$ is no later than $\$xt + .9$ seconds in the system time epoch) — or to 0 (if the current HK packet arrived too late to satisfy the software requirement 5.2.3.1). The expression

$$\$xt=((\$yt=\$LFCTIME+LFDMONS[7]/50.0) \leq \$xt+.9) ? \$yt : 0$$

therefore assigns to $\$xt$ either the current system time, $\$yt$, or 0, depending, in effect, on whether the test requirement was verified or not. However, this expression, in addition to assigning a value to $\$xt$, also *itself takes on the assigned value*; hence its value (namely $\$xt$) may be compared with 0, the “error value”. The result of this greater-than ($>$) comparison, either **true** (i.e., test succeeded) or **false** (test failed), is the condition checked by the script statement

CHECK 1,(($\$xt=((\$yt=\$LFCTIME+LFDMONS[7]/50.0) \leq \$xt+.9) ? \$yt : 0$) > 0)

2. SPECIAL INSTRUCTIONS

2.1 QUALITY ASSURANCE

QA support is required to verify the configuration and setup environment as well as monitoring test steps and verifying results.

2.2 SAFETY

2.2.1 Personal Safety

To ensure the safety of the test personnel during test execution the guidelines contained in Paragraph 3.4, Reference [1] will be adhered to.

2.2.2 Test Article and Equipment Safety

- If access within one (1) meter of COS bench electronics is necessary, wrist straps attached to technical ground shall be used by all personnel involved in handling of any COS test article. Overcurrent and overvoltage shall be set to remove power if nominal limits are exceeded.
- Emergency Power Shutdown — If, during the COS DCE FSW test, power is ON and a severe test equipment failure results in the power system exceeding specified limits, the Test Conductor shall direct or perform shutdown of power.

2.3 CONTAMINATION

All flight hardware shall be handled with clean latex gloves; it shall be covered with clean ESD material and/or stored in a clean flow-bench.

3. SUPPORT REQUIREMENTS

3.1 PERSONNEL

Execution of the COS DCE FSW certification procedure requires the following personnel (to be completed at the Test Readiness Review (TRR)):

Test Director: _____

Test Conductor: _____

Test Technician: _____

QA: _____

3.2 TOOLS, EQUIPMENT, AND MATERIALS

The following is a list of tools, equipment, or materials required in this test. Record manufacturer and model, metrology, or property numbers of equipment used, where appropriate. Record calibration due dates where appropriate.

Boot Mode ROM: schematic **27C256**

Engineering Ground Support Equipment (see paragraph 1.4). Indicate specific configuration:

EGSE			DCE		
taiyo	shorty	Ginger	ETU	DCE #1	DCE #2
	X			X	

3.3 DATA/SOFTWARE

The following files must be present:

Table 3-1: Required Program and Data Files

EGSE (shorty) Directory	File	Description
/disks/galex/users/galex/tcs/uniscript/	UniScript.pl	UniScript interpreter
/disks/galex/users/galex/tcs/uniscript/stp5_5_2_2/	u	Shell script for this procedure
Ditto	stp5_5_2_2.tst	Test script for this procedure (Appendix B)

In addition, the **hks** tools must be active. Directions for activating **hks** are given in UCB-COS-DOC-1118 (Paragraph 3.4, Reference [4]).

3.4 REQUIRED DOCUMENTATION

Reference	Document Number	Title
1	NHB 1700.1(V1-A)	<i>NASA Basic Safety Manual</i>
2	COS-03-0066	<i>DCE FSW Test Procedure 5.5.2.2</i> (this document)
3	UCB-COS-008	<i>COS FUV Detector Software Test Plan</i>
4	UCB-COS-DOC-1118	<i>COS EGSE Startup Procedure</i>

4. PROCEDURE/TASK STEPS

4.1 PRE-OPERATION ACTIVITIES

4.1.1 Make Sure that **hks** Tools Are Active

Follow the procedure given in Paragraph 3.4, Reference [4].

4.1.2 Make Sure that the Proper ROM Is Installed

Visually verify that the ROM under test is installed: if EEPROM, in U18; if PROM, in U2 and U7.

4.1.3 Log In to the EGSE

Step	QA	Operator Entry/System Response	Description
1		C:\tcs\us> telnet shorty.ssl.berkely.edu	Establish connection to shorty via Telnet client program
2		Login: xxx Password: -----	Using telnet window, login as user tcs

4.1.4 Set Current Directory

Step	QA	Operator Entry/System Response	Description
3		tcs@shorty% cd ~galex/tcs tcs@shorty% pwd /disks/galex/users/galex/tcs	Change current directory as shown

4.1.5 Slogin as eagcos

Step	QA	Operator Entry/System Response	Description
4		tcs@shorty% slogin -l eagcos shorty.ssl.berkeley.edu eagcos@shorty.ssl.berkeley.edu's password: (get from SSL personnel) Last login: Sat Oct 7 10:41:05 2000 from auntem.ssl.berke Sun Microsystems Inc. SunOS 5.8 Generic February 2000 You have mail. COS EGSE software version: devel	slogin as eagcos; get password from SSL personnel

4.1.6 Set Current Directory

Step	QA	Operator Entry/System Response	Description
5		eagcos:shorty% cd /disks/galex/users/galex/tcs/uniscript/stp5_5_2_2 eagcos:shorty% pwd /disks/galex/users/galex/tcs/uniscript/stp5_5_2_2	Change current directory as shown

4.1.7 Ensure that Proper Files are Present

Step	QA	Operator Entry/System Response	Description
6		eagcos@shorty% ls -l Total 12 -rw-r--r-- 1 tcs eag 1398 Oct 8 18:03 stp5_5_2_2.tst -rw-r--r-- 1 tcs eag 62 Oct 9 17:44 u	List files; the .tst file and the shell script u should be present

4.2 OPERATION EXECUTION

4.2.1 Establish Initial Test Conditions

Step	QA	Operator Entry/System Response	Description
7		eagcos:shorty% set path=(\$path ~dbb/scripts/bin)	Set path as shown to enable access to hks tools

4.2.2 Execute the Script

Step	QA	Operator Entry/System Response	Description
8		sh u \$pstring=C000,2460,0,0,0,0,0 Parameters are: Script File: stp5_5_2_2 #0: C000 #1: 2460 #2: 0 #3: 0 #4: 0 #5: 0 #6: 0 #7: 0 Report file >/disks/galex/users/galex/tcs/ver_1_13/stp5_5_2_2/ stp5_5_2_2.rpl successfully opened. Report file >/disks/galex/users/galex/tcs/ver_1_13/stp5_5_2_2/	Shell to u. You should see the accompanying output as UniScript executes

Step	QA	Operator Entry/System Response	Description
		<p>stp5_5_2_2.rp2 successfully opened. Script file</p> <p>/disks/galex/users/galex/tcs/ver_1_13/stp5_5_2_2/s tp5_5_2_2.tst successfully opened at level 0.</p> <p>"Sending two PORs, WAITS" "Uploading 1024 bytes to C000"</p> <p>LFDMADDR 7,mTICKS,EXTERN</p> <p>WAIT 0: HKV0=1; HKV1=0; wc=1 WAIT 1: HKV1=0; wc=0</p> <p>LFDUPLOD SCRATCH,NBYTES,CRC1</p> <p>WAIT 0: HKV0=3; HKV1=1; wc=1 WAIT 1: HKV1=2; wc=0 "Downloading the 1024 byte block and comparing"</p> <p>LFDDNLOD SCRATCH,NBYTES</p> <p>WAIT 0: HKV0=5; HKV1=3; wc=0 "Download 1 OK; proceeding"</p> <p>LFDDNLOD SCRATCH,NBYTES</p> <p>WAIT 0: HKV0=6; HKV1=4; wc=0 "Download 2 OK; proceeding"</p> <p>LFDDNLOD SCRATCH,NBYTES</p> <p>WAIT 0: HKV0=7; HKV1=5; wc=0 "Download 3 OK; proceeding"</p> <p>LFDDNLOD SCRATCH,NBYTES</p>	

Step	QA	Operator Entry/System Response	Description
		<p>WAIT 0: HKV0=8; HKV1=6; wc=0 "Download 4 OK; proceeding"</p> <p>LFDDNLOD SCRATCH,NBYTES</p> <p>WAIT 0: HKV0=9; HKV1=7; wc=0 "Download 5 OK; proceeding"</p> <p>LFDDNLOD SCRATCH,NBYTES</p> <p>WAIT 0: HKV0=10; HKV1=8; wc=0 "Download 6 OK; proceeding"</p> <p>LFDDNLOD SCRATCH,NBYTES</p> <p>WAIT 0: HKV0=11; HKV1=9; wc=0 "Download 7 OK; proceeding"</p> <p>LFDDNLOD SCRATCH,NBYTES</p> <p>WAIT 0: HKV0=12; HKV1=10; wc=0 "Download 8 OK; proceeding"</p> <p>LFDDNLOD SCRATCH,NBYTES</p> <p>WAIT 0: HKV0=13; HKV1=11; wc=0 "Download 9 OK; proceeding"</p> <p>LFDDNLOD SCRATCH,NBYTES</p> <p>WAIT 0: HKV0=14; HKV1=12; wc=0 "Download 10 OK"</p> <p>WAIT 0: HKV0=14; HKV1=13; wc=10</p> <p>WAIT 1: HKV1=13; wc=9</p> <p>WAIT 1: HKV1=14; wc=8</p> <p>"Test 5.5.2.2 completed successfully"</p> <p>eagcos:shorty%</p>	

4.3 POST-OPERATION ACTIVITIES

4.3.1 Copy Reports to PC Files and Print Them

Using an FTP client, copy the **u**, **stp5_5_2_2.tst**, **stp5_5_2_2.rp1**, and **stp5_5_2_2.rp2** files to appropriate PC files. Include these files as Appendices A, B, C, and D with this completed form.

4.3.2 Complete The Test Procedure Form

Ensure that all blank fields in this report are completed correctly and submit the completed report to QA.
