## 1. INTRODUCTION

### 1.1 PURPOSE

This document presents the Cosmic Origins Spectrograph (COS) Device Control Electronics (DCE) Flight Software (FSW) certification procedure. The purpose of this procedure is to verify that the FSW satisfies Software Requirements according to the method specified in the DCE FSW Test Plan (STP).

### 1.2 SCOPE

This test procedure comprises the steps necessary to verify that the FSW satisfies Software Requirements Document (SRD) paragraph 5.5.3.1 — CRC Background Checking on Memory Regions.

### 1.3 LIMITATIONS AND CONSTRAINTS

This test cannot be run in parallel with any other commanding activity directed at the DCE FSW (such as, for example, the periodic transmission of NOOP commands). Test hardware shall be visually inspected, and its configuration noted, prior to conducting this test.

### 1.4 PROCEDURE OVERVIEW

The procedure requires the `hks` tools running on the Sun SparcStation Electronic Ground Support Equipment (EGSE) whose network IP address is one of

**shorty.ssl.berkeley.edu**  
**taiyo.ssl.berkeley.edu**  
**ginger.ssl.berkeley.edu.**

Test time shall be scheduled in advance. The Test Conductor must be logged into the Unix system as user `eagcos`, and be commanding from the appropriate directory. This directory contains both the test script file and the shell script file; these two files control test execution. The test is conducted by invoking the shell script. This shell script in turn invokes the Perl 5 program `UniScript.pl`, which resides in its own distinct directory. The test procedure steps have been pre-recorded in the test script file, and are executed interpretively by the `UniScript` program. The shell script and test script are attached to this document as appendices. As `UniScript` executes the test script it sends results to the operator console and to two report files, which are also placed in the current directory. After completion of the test script, the Test Conductor can certify successful test

execution by examining the contents of the report files and determining that required outputs are present in them. Printed copies of the report files are attached to the manually completed checklist (Paragraph 4 below) as documentation of the test.

### 1.5 THEORY OF TEST

The contents of the 16K ROM actually consist of 6K (=6144) encoded bytes. The script downloads the ROM to UniScript Buffer 2. Since UniScript automatically re-computes the CRC of its buffers whenever they are modified, the variable \$CRC2, which contains the CRC of Buffer 2, can be compared to the value, LFMROM, present in the HK data.

### 1.6 TEST SCRIPT IMPLEMENTATION

#### 1.6.1 Test Script Arguments

The script is parameterized as shown in the following Table:

**Table 1-1: Parameters/Arguments for stp5\_5\_3\_1.tst**

Parameter	Meaning	Correct Argument for Version 1.13
#0	Absolute hex storage address of intermediate “scratch” area for ROM download operations	C000

These parameters must be encoded into the shell script `u` (see Appendix A).

#### 1.6.2 Test Script Coding

The script uses standard UniScript commands and directives. The downloading of memory regions must be done via the LFDDNLOD command. However, this command has two relevant limitations:

- it downloads external RAM regions only;
- individual downloaded blocks are limited to 1K.

For these reasons, the script downloads the six 1K “pages” of ROM by six iterations of the two operations

- copy a 1K page from ROM to a “scratch” area in external RAM using the LFDCOPY command;

- download the 1K “scratch” area to Buffer 2 at the appropriate offset, using the LFDDNLOD command.

**2. SPECIAL INSTRUCTIONS**

**2.1 QUALITY ASSURANCE**

QA support is required to verify the configuration and setup environment as well as monitoring test steps and verifying results.

**2.2 SAFETY**

**2.2.1 Personal Safety**

To ensure the safety of the test personnel during test execution the guidelines contained in Paragraph 3.4, Reference [1] will be adhered to.

**2.2.2 Test Article and Equipment Safety**

- If access within one (1) meter of COS bench electronics is necessary, wrist straps attached to technical ground shall be used by all personnel involved in handling of any COS test article. Overcurrent and overvoltage shall be set to remove power if nominal limits are exceeded.
- Emergency Power Shutdown — If, during the COS DCE FSW test, power is ON and a severe test equipment failure results in the power system exceeding specified limits, the Test Conductor shall direct or perform shutdown of power.

**2.3 CONTAMINATION**

All flight hardware shall be handled with clean latex gloves; it shall be covered with clean ESD material and/or stored in a clean flow-bench.

**3. SUPPORT REQUIREMENTS**

**3.1 PERSONNEL**

Execution of the COS DCE FSW certification procedure requires the following personnel (to be completed at the Test Readiness Review (TRR)):

Test Director: \_\_\_\_\_  
 Test Conductor: \_\_\_\_\_

Test Technician: \_\_\_\_\_

QA: \_\_\_\_\_

3.2 TOOLS, EQUIPMENT, AND MATERIALS

The following is a list of tools, equipment, or materials required in this test. Record manufacturer and model, metrology, or property numbers of equipment used, where appropriate. Record calibration due dates where appropriate.
